

Web Design and Web Hosting

# Web Development

*Adobe ColdFusion Specialists*

## **APPLICATION DEVELOPMENT**

### **Rapid Application Development**

Out-of-the box web-based software solutions were written to cover specific needs of the developer, who then repackaged the application, and made it available to the public. However, it may not fit your needs entirely and may need to be replaced or rewritten to be useful to you.

At EPhost we can custom create additional functionality or create entirely new applications to fit the needs of our clients. Our solutions have included advanced data importing from local ERP systems, shopping cart software, complex multi-step form collection, order management applications, dynamic PDF creation, custom search engines, as well as simple modifications to existing applications.

### **How Big Can You Think?**

Whatever it is that you want to do online we have a solution for you. Your hardest decision will be what you want to do first. Will you be the next Facebook or eBay?

If conquering the social media world is not for you, then perhaps you have a business logistical problem you need solved. How to get data X into system Y? These problems are very real and can be costly if no solution is found.

*"The moment someone sees their idea come to life, it dawns on them that anything is possible. It's very rewarding."*

### **The Solution**

Whether you have a small modification or need a full blown application developed the EPhost Web Development Team can help. Our specialty is ColdFusion, but we are also skilled in PHP, AJAX and client-side scripting like JavaScript.

### **A Powerful Combination**

It is simply not enough to know "code". Web projects are always comingled with business logic and server-side technologies without which it will never meet the goals intended. This is where many development efforts go wrong- before the project even starts.

At EPhost we are more than just web developers. We are life-long entrepreneurs and have 15 years experience with server technologies and concepts. Add to this we have a solid development methodology which will make your application extendable and manageable in the long term.

### **Why Adobe ColdFusion?**

We use Adobe ColdFusion because it was created with "Rapid Application Development" in mind. From the very beginning it was designed to make programming powerful while being straightforward.

ColdFusion is an enterprise platform that can be scaled from a few hundred hits to a multi-server cluster serving millions of requests. ColdFusion is used by many government agencies, banks and fortune 500 companies worldwide.
